

Manish Pandey

Data Engineer · dbt · Azure Databricks · CDC · Data Warehousing

Gurugram, India · +91-9140357957 · mp4966@gmail.com · 5 years

SUMMARY

Data Engineer with 5 years building production data platforms across public-sector exam analytics, telecom, and automotive. Currently own the **Staff Service Commission (SSC) Candidate 360 warehouse** — source-to-mart ELT in **dbt** (incremental models), served on **Apache Superset**. Previously delivered **Oracle GoldenGate CDC**, **Azure Databricks** (Spark SQL / PySpark), multi-region master-data migrations, and **GitLab CI/CD**. End-to-end ownership: dimensional modeling, incremental loads, data quality, production support.

SKILLS

Languages	SQL (windows, incremental MERGE, query tuning), PL/SQL, Python (validation, reconciliation, automation)
Data platform	dbt (staging / intermediate / marts, incremental, tests, docs), Azure Databricks (Spark SQL / PySpark), Apache Superset, OBIEE
Warehousing	Dimensional modeling, Candidate 360, fact-dimension design, incremental ELT, data lineage, reconciliation
CDC & integration	Oracle GoldenGate (Extract/Replicat, trail/lag,abend recovery), Data Guard, ODI, WebMethods, Siebel
Engineering	GitLab CI/CD, Git, production incidents, runbooks, Oracle, MariaDB

EXPERIENCE

Data Engineer (Consultant)

Apr 2022 – Present · Gurugram

Cubastion Consulting

Enterprise data, integration, and analytics. Own pipelines from development through production support.

Staff Service Commission (SSC) — Candidate 360 Data Platform **Current** · **dbt** · **Warehouse** · **Superset**

- Built the SSC analytics warehouse: source systems → **dbt** staging → intermediate → marts for reporting-ready models.
- Implemented **incremental dbt models** (unique keys + lookback / MERGE) so daily candidate and exam updates load without full refresh, with history for restatements.
- Modeled **Candidate 360** — one grain per candidate covering SSC registration, exam stages, status transitions, attempts, and results.
- Dimensional design (candidate / exam / stage dims + activity facts) plus dbt tests (not_null, unique, relationships) so bad keys never reach dashboards.
- Delivered **Apache Superset** dashboards: candidate 360 profile, stage-funnel drop-off, and freshness / ops views.

Enterprise ICDB Data Platform — Phase 1 **Databricks** · **SQL** · **GitLab CI/CD** · **Lineage**

- Built GitLab **CI/CD** to deploy database objects across environments with controlled, rollback-safe releases.
- Tuned advanced SQL / PL/SQL for BI and downstream apps; used plans/rewrites to cut expensive scans and bad joins.
- Delivered analytics-ready tables on **Azure Databricks** (Spark SQL / PySpark) aligned to warehouse grain and business rules.
- Reverse-engineered OBIEE SQL for **lineage** and bottlenecks; mapped sources to ICDB tables and validated business rules through release cycles.

Enterprise ICDB Data Platform — Phase 2 (Integration & AMS) **Integrations** · **Production**

- Built and supported WebMethods services moving data between internal systems and downstream platforms under AMS SLAs.
- Monitored live services, analysed logs, ran incident RCA, and wrote runbooks for data flows and operational fixes.

BI & DMS Managed Services Platform **OBIEE** · **ODI** · **SLA**

- Owned BI managed services (OBIEE + ODI): incidents and change requests within SLA; backtraced report issues to joins, filters, and data gaps.
- Fixed ODI mappings, agent config, and load validations; mentored juniors on troubleshooting, reconciliation, and CI/CD hygiene.

Multi-Region Master Data Migration (Wave / Phase-Based Rollout) **ODI** · **Reconciliation** · **Python**

- Executed wave-based **master data migrations** across regions with completeness and key-integrity checks.
- Built ODI packages (legacy → target) and pre/post reconciliation in SQL + Python (row counts, keys, attributes); closed mapping/DQ gaps via SQL backtracing.

Database Upgrade — CDC & Rollback Implementation **GoldenGate** · **Data Guard** · **Python**

- Designed **CDC + rollback** for a Siebel upgrade using **Oracle GoldenGate** (hub/client, Extract/Replicat, INIT/sync) and Active-Active Data Guard for HA/fallback.
- Owned lag analysis, LogDump trail troubleshooting, andabend recovery during cutover.
- Wrote Python CSV-diff utilities for mismatches; delivered Oracle → MariaDB SQL/PLSQL transforms with GitLab CI/CD validation.

EDUCATION

B.Tech, Electronics and Telecommunication Engineering — Chandigarh Engineering College, Chandigarh 2021 · CGPA 7.8/10
