

Manish Pandey

Data Engineer · Apache Spark · PySpark · Azure Databricks · dbt · SQL · Python · ETL · CDC

Gurugram, India · +91-9140357957 · mp4966@gmail.com · 5 years

SUMMARY

Data Engineer with 5 years building production **data pipelines**, **data warehouses / lakehouse** tables, and **CDC**. Own the **Staff Service Commission Candidate 360** platform: **dbt** ELT on **Azure Databricks (Apache Spark / PySpark / Spark SQL, Delta Lake, ADLS)**, incremental loads, CI tests, **Apache Superset**. Also delivered production CDC (GoldenGate), Spark job tuning, ETL migrations, and GitLab CI/CD. Stack recruiters search: SQL, Python, Spark, Azure, Databricks, dbt, ETL/ELT, CDC, data modeling, data quality.

SKILLS

Apache Spark, PySpark, Spark SQL, Python, SQL, Azure Databricks, Delta Lake, Azure, ADLS, dbt, ETL, ELT, CDC, Data Warehousing, Data Modeling, Data Pipelines, Lakehouse, GitLab CI/CD, Apache Superset, Oracle GoldenGate, ODI, Git, Incremental Load, SCD Type 2, Star Schema, Data Quality, Parquet

Languages	Python, SQL (windows, MERGE, incremental, query plans), PySpark, Spark SQL, PL/SQL
Lakehouse	Azure Databricks, Apache Spark, Delta Lake, ADLS, dbt (bronze/silver/gold, incremental, tests), Apache Superset
Pipelines	ETL, ELT, CDC, batch data pipelines, dimensional / star schema, SCD Type 2, data quality, lineage
CDC & ETL	Oracle GoldenGate (Extract/Replicat, lag, recovery), ODI, Data Guard, Oracle, MariaDB
Engineering	GitLab CI/CD, Git, Azure, production monitoring, incident RCA, runbooks

EXPERIENCE

Data Engineer (Consultant)

Apr 2022 – Present · Gurugram

Cubastion Consulting

Production ETL/ELT, Spark lakehouse, warehouse, and CDC for exam analytics, telecom, and automotive.

Staff Service Commission (SSC) — Candidate 360 Data Platform [Current](#) · [dbt](#) · [Spark](#) · [Databricks](#) · [Superset](#)

- Built production **ELT data pipelines**: source → dbt bronze/silver/gold (staging/intermediate/marts) as incremental **Delta / Parquet** tables on **Azure Databricks** (ADLS, Spark SQL / PySpark).
- Ran production **incremental loads** (unique_key + lookback MERGE) so daily candidate/exam changes skip full refresh; kept SCD Type 2-style history for restatements.
- Modeled **Candidate 360** star schema (grain: 1 candidate) — registration, exam stages, status, attempts, results — for warehouse / BI consume.
- Enforced **data quality** with dbt tests (unique, not_null, relationships) in **GitLab CI/CD** so bad data never reaches gold.
- Shipped **Apache Superset** dashboards: 360 profile, stage funnel, pipeline freshness.

Enterprise ICDB Data Platform — Phase 1 [Apache Spark](#) · [Databricks](#) · [SQL](#) · [CI/CD](#)

- Built ICDB lakehouse tables on **Azure Databricks** with **Apache Spark (PySpark / Spark SQL)** and Delta; partitioned Parquet/Delta for prune-friendly reads.
- Tuned production Spark/SQL jobs (joins, filters, file sizing, shuffle) using query plans to cut scans and runtime.
- Automated data-object releases with **GitLab CI/CD** (dev → prod, rollback-safe).
- Documented data lineage source → warehouse → consumers; validated grain and business rules each release.

Enterprise ICDB Data Platform — Phase 2 (Production pipelines) [ETL](#) · [SLA](#) · [Monitoring](#)

- Operated production batch data pipelines between sources and downstream systems under SLA; monitoring, RCA, replay, runbooks.

Production ETL & Warehouse Support [ETL](#) · [SQL](#) · [Data quality](#)

- Owned production **ETL** (ODI) and warehouse loads within SLA; traced bad metrics to joins, filters, and source gaps; row-count / reconciliation checks.

Multi-Region Master Data Migration (Wave rollout) [ETL](#) · [Python](#) · [SQL](#)

- Executed wave-based master-data ETL across regions; SQL/Python reconciliation on row counts, keys, attributes before cutover.

Production CDC & Rollback (Database upgrade) [CDC](#) · [GoldenGate](#) · [Python](#)

- Designed production **CDC** with **Oracle GoldenGate** (Extract/Replicat, INIT/sync) and Data Guard rollback/HA for a database upgrade; lag, trail, abend recovery.
- Python extract-diff jobs plus Oracle → MariaDB transforms validated in GitLab CI/CD.

EDUCATION

B.Tech, Electronics and Telecommunication Engineering — Chandigarh Engineering College, Chandigarh 2021 · CGPA 7.8/10
